About the Developer | Keith Kornacki

I am a well-rounded professional who has worked in a variety of industries. I thrive when faced with challenges and perform well in both team and individual working environments. Utilizing my knowledge, technical skills and soft skills, I always strive to exceed expectations, grow & develop working relationships and contribute to the goals of the team and organization to which I belong.

My end goal is to establish a lifelong career as a software developer, wherein I can contribute to achieving the established goals of my team and employer by utilizing my current and future skills and industry knowledge.

I am extremely interested in enhancing my skills with both the Python & Java programming languages, especially as relates to developing business software such as ERP systems, Java Servlets and other related types of programs. I believe Machine Learning and AI Software in general is an amazing tool and should be used to enhance the productivity and overall efficiency of developers (rather than simply replacing them).

Programming is not just a job – it is a way of life. As such, a programmer is always learning and growing in their role. We learn lessons along the way and strive to become better than we were the previous day. My view is that we all start from the same point: zero knowledge, zero experience – and through our opportunities and hard work, we become what we envision ourselves as: full-fledged programmers creating viable, scalable, useful software solutions for businesses and individuals.

I sincerely look forward to making new professional connections, becoming a part of a cohesive, productive development team, and growing personally and professionally as a developer!
